

Case Mounting Mounting options for Novasub SCC and DP cases

ALB-5122

The ALB-5122 is an aluminium bracket used for the TRITON-C1 case. The bracket can be attached to a wall using the mounting holes in the back of the bracket. The case can then be put down in the bracket and the top handle can then be turned around the handle holder. This way the case can be removed and placed easy and fast.

SSB1-SCC

The SSB1-SCC are two stainless steel brackets with butterfly locks. This system can be used to secure cases with Diver Gas Panels (DP). Please note that the bracket is not meant to solely hang a case to a wall. The case does still need to be supported from below.

SSB2-SCC

The SSB2-SCC is a stainless steel bracket with butterfly locks. This bracket can be used to secure the TRITON-C1. Please note that the bracket is not meant to solely hang the case to a wall. The case does still need to be supported from below.
